David and Kirk

Phil and Earl are looking to estimate the time required to review QEA's work. David, I think Kirk is on vacation. I would appreciate your thoughts.

Bob,

Can you help Earl with his questions??

Thanks,

Phil Allen

Phil,

ERDC received the request for me to perform the review of QEA's sediment transport modeling report. Do you know when they will be delivering the report to you, and do you have any idea how big the report will be? I need to tell the person at ERDC who received the request from the SSRC about how many hours it will take me to review the report. If you do not know the answer, I will guess that it will take 5 days.

Thanks,

Earl

	USACE review of sediment modeling	
	for the Patrick Bayou Superfund	
	site	

Steve,

I am the RPM for the subject site; and Dr. Hayter of the USACE has informed me that there is a "master" IAG set up for help on sediment sites.

I need Dr. Hayter to review a some sediment transport modeling work performed by QEA, for the Patrick Bayou Superfund site located in Deer Park, Texas. Dr. Hayter anticipates this review to take about one week. Can you please help me provide funds for this effort, as I am having a little trouble getting an IAG directly for Region 6?

Thanks in advance for your help,

Phil Allen
